Reproductive and sexual health has fundamental value both for individuals, married couples and families, and for social and economic development of communities and the nations. Protection of reproductive health is defined by the WHO at a global level as a priority area. Not only does the level of birth rate depend on its conditions but also the viability of the future generations. Preservation of reproductive potential of rising generation is a subject of national safety of any country. The concept of demographic policy of the Russian Federation for the period until 2025, approved by the decree of the President of the Russian Federation (the Decree of the President of the Russian Federation from 09.10.2007 № 1351), defines one of the problems – Strengthening of reproductive health of the population.

The issue of reproductive health in Russia is primarily a problem of abortion and the low level using modern contraceptive methods. The main reason is the number of myths and misconceptions about abortion and modern hormonal and nonhormonal contraceptive methods among doctors and their patients. A very important aim of the event was to discuss the myths about contraception, presentation of the modern data of the "The First Global Conferences on Reproductive Health " Copenhagen, May 2013 for their elimination and increasing complains of doctors to modern contraception.

In the Kemerovo region safe abortion (including medical abortion up to 63 days) is covered by the state guarantee program since 2009. The one of the main objective of the event was to discuss and adopt a protocol for medical abortion in the second trimester of the WHO (2012) for the Kemerovo region. Some medical institutions of the region have a positive experience of the medical abortion in the second trimester. This experience should be extended to all medical facilities of the Kemerovo region.

The workshop was attended by 126 obstetrician-gynecologist from different areas of the Kemerovo-Region (26 cities and areas).

The support of these workshop by ESC was widely presented in local mass-media and in the printed workshop program.
